

La Marzocco Technical Bulletin #119

New Swift Burrs and Adjusting Axle

We are pleased to inform you that all Swift grinders starting from SN 5446 are equipped with new burrs. The new ceramic material (pictured below, brown) and the new machining processes guarantee greater precision.

Our laboratory has found, after several tests with our laser size particle analyzer, that the consistency of the grind has vastly increased. Moreover, the higher precision wears the burrs wear in a more uniform fashion

The new burrs are available through the Parts Department with code 5.200.30.01

Additionally, the right adjusting gear axle has been reinforced. This modification is not visible when the part is assembled with the gear.

handmade in florence

The new axle is present on every Swift grinder starting from SN 5470.

The spare part 5.200.31.R RIGHT GRIND ADJUSTING GEAR W/ROLL PINS is available with the same code.

Please do not hesitate to contact our solutions team with any questions you have about this update.
