

La Marzocco Technical Bulletin #138

New hoppers for Swift.

April 6, 2017

There are new hoppers now available for the La Marzocco Swift grinder. The external design aesthetic has not changed although an internal safety guard has been added. Additionally, the mold has been slightly changed around the base allowing a more uniform section and improving impact resistance. For this reason, hopper collars on Swift grinders with the old-style hoppers will not work with the new hoppers. If replacing an older Swift hopper you will need to also replace the hopper collar.

New material

The new Swift hoppers and lids are made using a next-generation copolyester. It is transparent, has excellent impact resistance and is 100% BPA free.

Only the new hoppers are available for purchase. A kit, including new collars, hoppers and lids for both the right and left side; is also available to retrofit one Swift grinder with the new hoppers.
